Master's Dissertation

Title: *Quantum and Classical Applications of Relativistic Relationship of Kinetic Energy and Momentum*

Supervisor: Dr. Vikash K Ojha, SVNIT-Surat; [Jul, 2023-May, 2024]–URL: shorturl.at/1Nug7

Keywords: Reconstruction of Relativistic Quantum Theory, Relativistic Classical Physics.

Brief Abstract: A newly found classical relation between relativistic kinetic energy K and relativistic momentum $\mathbf{p}$, namely $|\mathbf{p}|^2 = (1 + \gamma)mK$, involving Lorentz factor γ . The reported relation is replacing both the Newtonian non-relativistic energy-momentum formula and relativistic total energy-momentum relation, $E^2 = p^2c^2 + m^2c^4$, and that has sought application in both quantum and classical relativistic mechanics. Its application predicted the contractions of Bohr radius at relativistic speeds, corrected the expression of the Relativistic Lagrangian of a free particle, etc.
